# L SCOPE

## Surgical Precision & ergonomic enhancement

The fully integrated design of the Vorotek L Scope ensures the loupes and brilliant LED illumination are always optimally aligned. This places the Vorotek L Scope at the forefront of innovative design. The Vorotek L Scope is head worn (hands free), light weight (98gms) and emphasises simplicity, durability and comfort.

### Fully Integrated Design

The complete integration of the loupes and brilliant LED illumination ensures that both are always optimally aligned. This avoids the need for frequent adjustment, a characteristic of 'add on' lighting systems.

### Exceptional Optical Performance

The Vorotek L Scope features 2.5 X Magnification with superb clarity. The loupes deliver a crystal clear image with an extensive field of view and exceptional depth of field (focus). Available in various working distances.

### Surgical Quality LED Illumination

Vorotek's compound lens system and LED technology produces a brilliant **55,000 lux**. The field of illumination provides superior edge-to-edge uniformity across the entire field of view.

### Coaxial & Dimmable LED illumination

The location of the brilliant LED illumination is as close to the visual pathway as possible, allowing shadow free illumination of the entire field of view. The dimmer function provides 7 evenly spaced levels of illumination.

### Dual Function

The loupes can be easily rotated in and out of use, returning back into the exact set up position every time. Upward rotation of the loupes allows uninterrupted vision, with or without headlight illumination.

### Portable Power Supply

The 10hr Battery Pack (lithium Ion), either belt or pocket worn, provides 10 hrs of "on time" (at the maximum level of illumination).

### Ergonomic Design Features

Fully integrated, lightweight (98gms) emphasising simplicity, durability and comfort. The angle of declination of the loupes and illumination provides the ideal balance between head and neck position to minimise eye strain.

### L Scope Models

The titanium **SpecFrame model** can be fitted with prescription lenses. After initial set up, no ongoing adjustments/realignment is needed.

The **HeadBand model** is fully adjustable, ideal for shared use. It can be used over prescription glasses.
